About EREF

The mission of the Environmental Research & Education Foundation (EREF) is to advance scientific research and create educational pathways that enable innovation in sustainable waste management practices.

EREF's Data Analysis Program

EREF's Data Analysis Program was developed as part of the foundation's effort to expand its mission to advance knowledge and education for sustainable solid waste management. The primary objective of the Data Analysis Program is to aggregate and analyze solid waste data. The program also provides valuable experience to undergraduate and graduate students who assist in data gathering and analysis.

ANALYSIS OF MSW LANDFILL TIPPING FEES

The Environmental Research & Education Foundation (EREF) maintains a database of Municipal Solid Waste (MSW) landfills across the United States (EREF, 2017). This database was used to draw a sample of active facilities for analysis of MSW landfill (MSWLF) tipping fees. Landfill owners were contacted and asked to provide gate rate information for MSW disposal, supplemented by current website information on fees. For the purpose of this report, the terms gate rate, tip fee, and tipping fee are used interchangeably to refer to the per-ton fee for hauled MSW loads.

ANATOMY OF A TIP FEE

The annual Analysis of MSW Landfill Tipping Fees reports survey landfills to gather data on publicly available tipping fees. These are the fees that are typically paid by self-hauling customers who dispose of their MSW on an as-needed basis. Landfills can also offer customers contracted rates, which are determined through separate agreements and are often lower than publicly posted tip fees. These contracted rates are primarily negotiated with solid waste haulers and municipalities, which supply large, consistent streams of MSW to the landfill. Therefore, both tip fees and contracted rates play a role in the landfill's tonnage management and overall earnings. However, most contracted rates are considered proprietary and are not easily accessible to the public. Since self-hauling tipping fees are readily available, they are used in EREF's tipping fee reports to highlight trends in the waste economy. While the overall trends are reliable and rates directionally converge over time, changes in tip fees from year to year may not reflect changes in negotiated rate structures.

Landfills determine the cost of both types of fees through a variety of factors. Key considerations include landfill operating costs such as land acquisition, daily operations, closure expenses, gas collection, and post-closure maintenance. While these expenses are common across landfill sites, there are notable differences between private and public landfills. Private landfills typically offer both self-hauling tipping fees and contracted rates. In addition to covering daily operating expenses, they may also pay a "host fee," a predetermined per-ton fee to the local community, which is factored into their customer charges. Since private landfills operate for profit, they may also adjust rates to optimize revenue. In contrast, public landfills may allocate more funds toward community initiatives such as recycling programs, drop-off centers, and educational outreach. They may offset these additional costs and some operational expenses through government subsidies and shared resources with other public entities, which help keep their tip fees low despite the extra programming. Additionally, some public landfills offer free residential disposal while maintaining the monetized tipping fee for commercial businesses and outside customers.

Overall, contracted rates are typically lower than self-hauling tipping fees, as they provide landfills with a steady waste stream from business partners while offering cost savings to the contracted haulers. When comparing public and private tipping fees, private landfills typically charge higher rates (see Tables 7 and 8). They are larger and receive more tonnage than their public counterparts, even though there are more public landfills nationwide (EREF, 2016). These distinctions, public vs. private and self-hauling vs. contracted rates,

are two factors that will influence landfill tip fees; however, tipping fees are complex and are also subject to fluctuations over time, with minor increases or decreases occurring as various economic, regulatory, and operational factors dictate costs.

Figure 1 demonstrates these variations over time, starting in the 1980s. While experiencing occasional fluctuations, the overall trend shows a steady increase in tip fees. The Resource Conservation and Recovery Act (RCRA), signed into law in 1976, was a major change to the solid waste industry and led to initial changes in tipping fee structures. Subtitle D, finalized in 1991, further strengthened these regulations, leading to rising tip fees as landfills closed or adjusted pricing to meet new operational requirements, as evident by the sharp increase in fees from 1980 to 1990. Other minor fluctuations likely resulted from developments within the materials management industry or broader global events, including legal hearings and global disruptions like the 2019 COVID-19 pandemic. Starting in 2005, the inflation-adjusted tip fees stabilized, while the unadjusted values continued to rise. This suggests that most of the increase in tip fees over the past 20 years has been driven primarily by inflation.

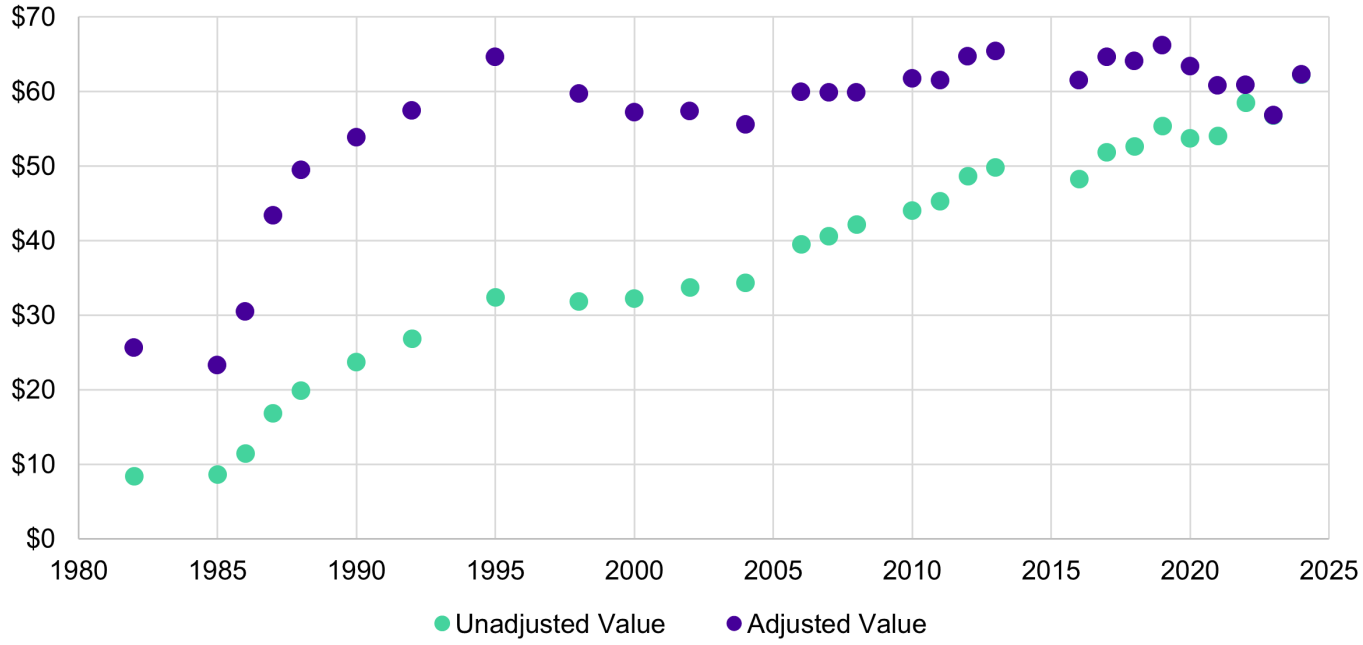

Figure 1. Unweighted Average Tip Fee (1980-2024)[a] [b]

[a] Data collected from US Environmental Protection Agency (2015), Waste & Recycling News (2012, 2013), and EREF (2024)

TRENDS IN UNWEIGHTED AND TON-WEIGHTED AVERAGE TIP FEES

In this study, 494 landfills were surveyed. MSW tip fee information was obtained from a total of 351 of those facilities. EREF has calculated a national average tip fee using two methodologies since 2018 (Figure 2). One method estimates an unweighted national average by averaging the fees of all observations or the total number of reporting landfills for each year. In this method, each landfill is equally weighted regardless of its size or the quantity of tonnage received annually. The other method is calculated by weighting fees based on the relative amount of MSW disposed of via landfilling and the tip fee at each facility to create a ton-weighted average. The ton-weighted average is calculated to account for differences in how each state's MSW tonnage varies due to factors such as total waste generation, fraction recovered for recycling and/or composting, and interstate transport (i.e., import and export of MSW).

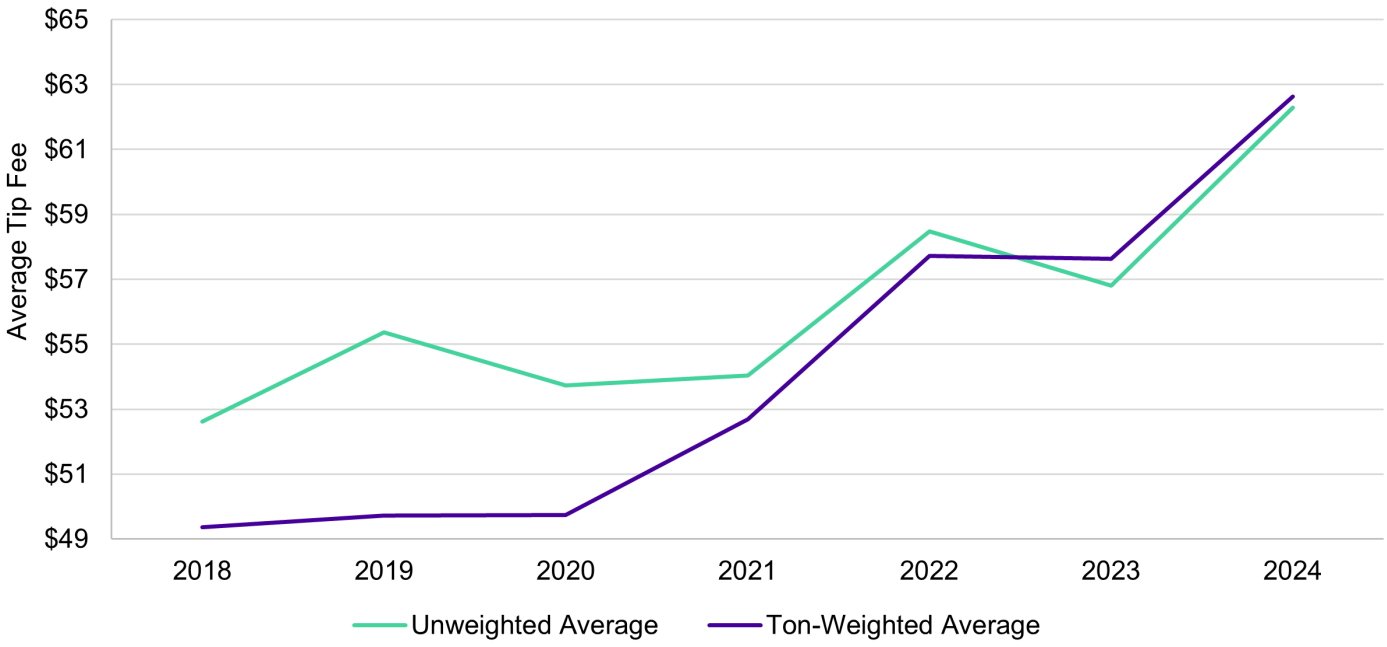

Figure 2. Unweighted and Ton-Weighted Average Tip Fee (2018-2024)

The unweighted average increased to $62.28 in 2024, a 10% increase from 2023 (Table 1). This is the largest increase in average tip fee since there was an 8% increase from 2021 to 2022. The ton-weighted average increased to $62.63 in 2024, a 9% or five-dollar increase from the $57.63 weighted average in 2023. However, this does not surpass the 10% increase in the ton-weighted tip fee that occurred from 2021 to 2022.

Table 1. Summary of Unweighted and Ton-Weighted Average Tip Fee (2018–2024)

Year	Unweighted Average	Ton-Weighted Average	Difference (%)	n
2018	$52.62	$49.36	6.61%	397
2019	$55.36	$49.73	11.33%	392
2020	$53.72	$49.73	8.02%	437
2021	$54.03	$52.68	2.55%	378
2022	$58.47	$57.73	1.29%	348
2023	$56.80	$57.63	-1.43%	342
2024	$62.28	$62.63	-0.55%	351

The increase in the ton-weighted average from 2023 to 2024 is due to the combination of large landfill tip fees consistently surpassing those of small and medium landfills since 2021 and the fact that large landfills manage a higher proportion of waste, which EREF estimates to be 56% of MSW (EREF, 2017). In comparison, medium landfills and small landfills manage 38% and 6% of waste, respectively. The increase in the unweighted average reflects increases in average fees for landfills of all sizes. This is also reflected in the considerable increases in average fees across most regions. Despite this increase, the ton-weighted tip fee average has surpassed the unweighted average for the second year in a row. The averages are very similar this year, showing only a 0.55% difference compared to 1.43% the previous year.

Figure 3 shows the distribution of tip fees, where the boxes in the figure represent 75% of the recorded fees and the diamond represents the average fee for that year. The vertical lines represent the minimum and maximum fees that were still close to the average whereas the dots show outliers. While EREF's annual tip fee report has shown average tip fees have generally increased, this figure highlights that there is a substantial spread between lower and upper values and multiple outliers for each data year. The increasing upper range and presence of outliers suggest that some larger facilities have significantly raised their prices, while the stable lower bounds indicate that a subset of landfills continue to offer relatively lower fees. In 2024, tip fees ranged in price from $320.00 to below $10.00, which dropped the lower bound of this year's data even lower than previous years. Overall, this figure highlights that while averages have increased, it is based on fees that can vary widely.

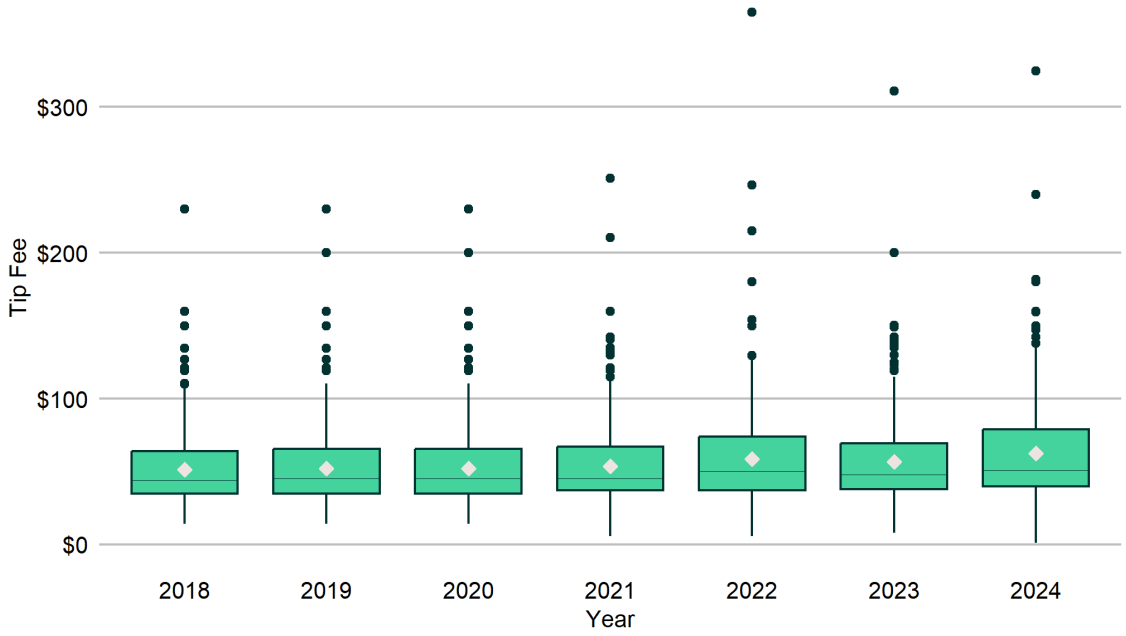

Figure 3. MSW Landfill Tip Fee (2018-2024)[a]

[a] Zeros are excluded from tip fee ranges.

SUMMARY OF STATE, REGIONAL, AND NATIONAL AVERAGE TIP FEES

Landfills are broken into three size categories, as follows:

- Large: accepting more than 390,000 tons/year
- Medium: accepting between 390,000 and 65,000 tons/year, and
- Small: accepting less than 65,000 tons/year.

Of the 351 landfills providing gate rate information in 2024, 22% were large, averaging 840,247 tons; 47% were medium, averaging 166,152 tons; and 32% were small, averaging 24,936 tons.

In 2024, large landfills had an unweighted average tip fee of $70.62, medium landfills averaged $56.98, and small landfills averaged $64.41 (Table 2). The average tipping fee in large landfills continued to increase. Large landfills have had the highest tip fees since 2021, when they exceeded the average of small landfill tip fees (Figure 4). However, their growth slowed this year, increasing by 2.5% compared to 7.4% and 11.2% in the previous two years. Medium and small landfill tip fee growth has remained largely steady since 2017. Both experienced increases in 2024, reaching their highest averages since 2017. Small landfills increased by 9.1% to $64.41 and medium landfills by 12.8% to $56.98. Small landfills continue to have higher average tip fees than medium landfills.

Table 2. Average MSW Landfill Tip Fees, by Size of Landfill (2017-2024)

Year	Small	Medium	Large
2017	$56.57	$49.51	$45.25
2018	$56.66	$48.77	$49.09
2019	$58.93	$50.11	$52.44
2020	$55.72	$50.87	$53.43
2021	$55.27	$50.36	$56.60
2022	$63.10	$52.27	$63.75
2023	$58.55	$49.70	$68.82
2024	$64.41	$56.98	$70.62

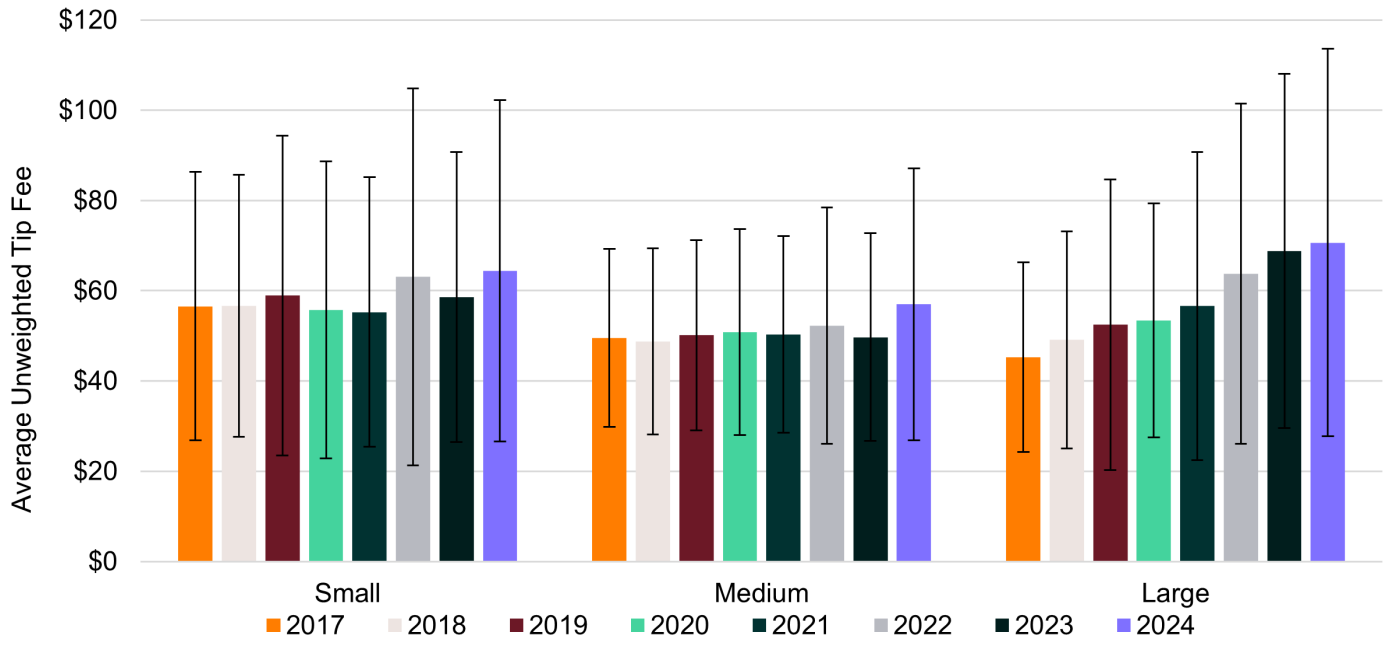

Figure 4. Average MSW Landfill Tip Fees, by Size of Landfill (2017-2024)[a]

[a] Range shown is the standard deviation

Summary of 2024 MSW Landfill Tip Fees

Tip fee data is also analyzed by EREF geographic region in addition to size categorization. EREF geographical regions are defined as follows:

- Northeast: CT, DE, ME, MD, MA, NH, NJ, NY, PA, RI, VT, VA, WV
- Pacific: AK, AZ, CA, HI, ID, OR, WA
- Midwest: IL, IN, IA, KS, MI, MN, MO, NE, OH, WI
- Mountains/Plains: CO, MT, ND, SD, UT, WY
- Southeast: AL, FL, GA, KY, MS, NC, SC, TN
- South Central: AR, LA, NM, OK, TX

The unweighted average tip fee was calculated using the number of observations for each U.S. region and state. All regions saw an increase in unweighted average tip fees of 10% or more in 2024, except for the Northeast and South Central regions, which experienced decreases (Table 3). The Northeast region saw a drop of $2.78 or 3%. The Pacific region had the greatest rise in 2023, with an increase of $10.60 or 17%. The South Central region experienced the smallest change out of the regions, with a decrease of $0.38 or 1%. The 2024 national unweighted average tip fee was $62.28, a $5.48 or 10% increase from the $56.80 2023 average tip fee. The unweighted average tip fee and standard deviation for each U.S. region and state can be found in Table A2.

Table 3. Average MSW Landfill Tip Fees, by Region

Region	Average Tipping Fee		
	2023	2024	Difference
Northeast	$83.44	$80.67	-$2.78
Pacific	$62.28	$72.88	$10.60
Midwest	$57.24	$66.09	$8.85
Mountains/Plains	$49.86	$56.61	$6.74
Southeast	$43.18	$50.12	$6.94
South Central	$45.25	$44.87	-$0.38
National Average	$56.80	$62.28	$5.48

The ton-weighted average was greater than the unweighted average for all but three regions – the Pacific, Mountains/Plains, and South Central regions. The Mountains/Plains region had the greatest difference between the ton-weighted and unweighted average of 6.42% (Table 4). The Pacific region also observed a higher difference between the two averages at 5.51%. The South Central region experienced the smallest difference between the two averages of 0.10%. This region also had the lowest average tip fee for both calculations, averaging $44.87 for unweighted and $44.82 for ton-weighted. The Northeast region had the highest average tip fee for both calculations, averaging $80.67 for unweighted and $84.12 for ton-weighted.

Table 4. Average Unweighted and Ton-Weighted MSW Landfill Tip Fees, by Region

Region	Average Tipping Fee		
	Unweighted	Ton-Weighted	Difference
Northeast	$80.67	$84.12	4.28%
Pacific	$72.88	$68.86	-5.51%
Midwest	$66.09	$69.21	4.72%
Mountains/Plains	$56.61	$52.97	-6.42%
Southeast	$50.12	$51.27	2.29%
South Central	$44.87	$44.82	-0.10%
National Average	$62.28	$62.63	0.55%

Annual Trends in the National Average

In 2024, unweighted landfill tip fees largely increased, halting the decreasing trend seen in 2023 (Figure 5). This upward trend resulted in the unweighted national average increasing by 10%. Similarly, the unweighted national average has increased by 3.19% year-over-year since 2020 and has increased overall by 29% since 2016, steadily trending upward throughout the years (Table 5). While the Northeast had the highest tip fees, the Midwest had the greatest year-over-year change, with an average increase of 7.62% since 2020. The Northeast, Pacific, and Midwest regions all have average fees higher than the national average. While the Northeast and Pacific regions have maintained this status since EREF began reporting, the Midwest surpassed the national average for the first time in 2022. All other regions saw year-over-year increases from 0-4%, and fees in all regions have increased since 2020.

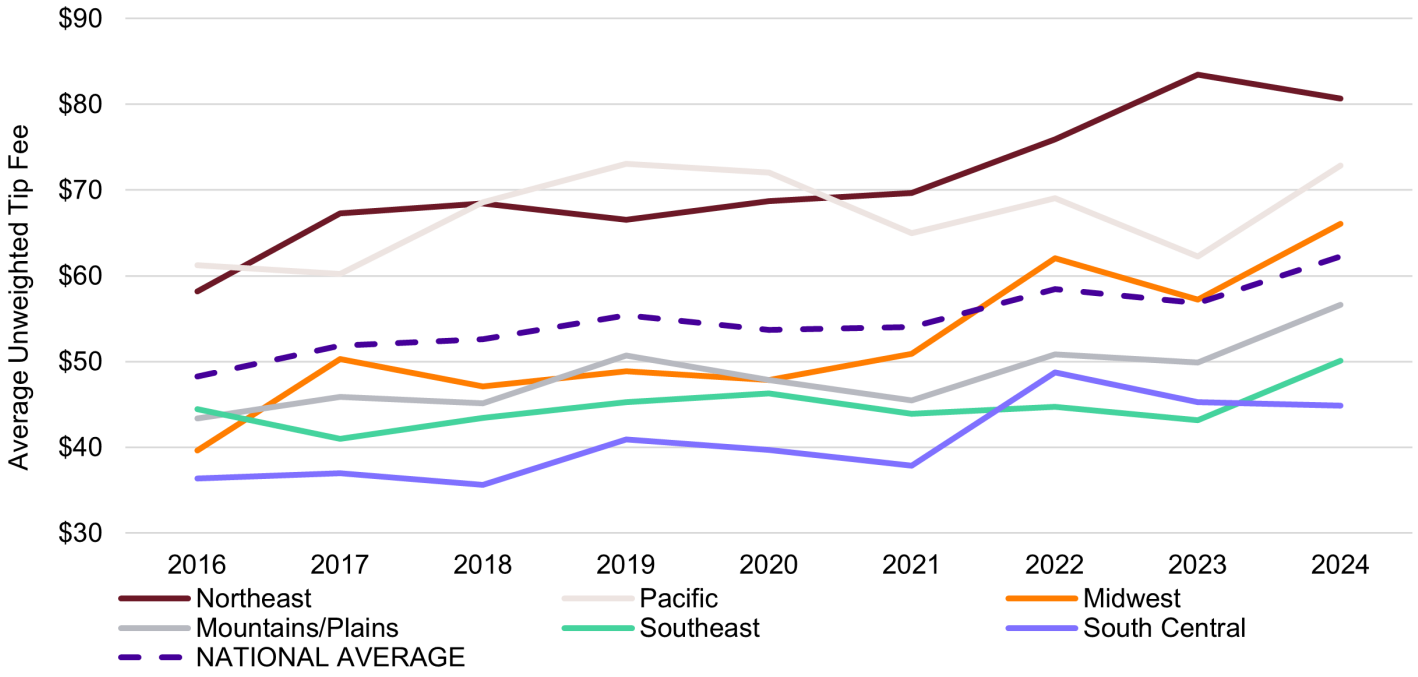

Figure 5. Regional Unweighted MSW Landfill Tip Fee Trend (2016-2024)

Table 5. Unweighted MSW Landfill Tip Fee Trend by Region (2020-2024)

Region	Average Tipping Fee					Average Year-Over-Year Change
	2020	2021	2022	2023	2024	
Northeast	$68.69	$69.64	$75.92	$83.44	$80.67	3.49%
Pacific	$72.03	$64.98	$69.02	$62.28	$72.88	0.24%
Midwest	$47.85	$50.93	$62.02	$57.24	$66.09	7.62%
Mountains/Plains	$47.83	$45.46	$50.84	$49.86	$56.61	3.67%
Southeast	$46.26	$43.89	$44.75	$43.18	$50.12	1.67%
South Central	$39.66	$37.87	$48.70	$45.06	$44.87	2.62%
National Average	**$53.72**	**$54.03**	**$58.47**	**$56.80**	**$62.28**	**3.19%**

Trends in States with Waste-to-Energy

Like previous years, tip fees remain significantly higher in states with MSW waste-to-energy (WTE) than in those without ($p<0.05$). See Table A2 for identification of states with WTE. The average tip fee for WTE states was $71.28 in 2024, compared to the $55.57 observed in non-WTE states, a 28% or $15.72 difference. In 2023, WTE and non-WTE states had a difference of 30%. WTE state tip fees saw an increase of $5.71 or 9% from 2023. Non-WTE state tip fees also observed an increase of $5.14 or 10% from 2023, keeping the year-to-year change largely similar.

Construction & Demolition Waste Pricing at MSW Landfills

Tip fees for construction & demolition (C&D) landfills were collected in addition to MSWLF information. In states that allow it, C&D waste is the most common waste type to arrive at MSW landfills outside of traditional MSW. C&D waste is accepted at MSW landfills in 41 states and comprises roughly 12% of the landfilled stream, on average (EREF, 2019).

Of the 351 landfills providing MSW information, 226 also provided C&D information. The national average tip fee for C&D waste in 2024 was not statistically different ($p>0.05$) from the MSW tip fee at $65.84/ton for C&D compared to $62.28/ton for MSW (Table 6). The average in 2023 was $59.26, an increase of $6.58. Just over half of landfills (55%) set the tip fees the same for MSW and C&D waste in 2024, consistent with years past. Additionally, 24% of sites have C&D waste priced lower than MSW waste, and 20% of sites have C&D waste priced higher than MSW waste (Table 6).

Table 6. Construction & Demolition (C&D) Pricing Summary

	2024[b]	% of Total
National Average C&D Tipping Fee[a]	$65.84 ± $47.62	
National Average MSW Tipping Fee[c]	$62.28 ± $35.98	
# Sites where C&D and MSW priced the same	125	55%
# Sites where C&D priced lower than MSW	55	24%
# Sites where C&D priced higher than MSW	46	20%

[a] For C&D disposed of at MSW landfills
[b] Average tip fees reported ± standard deviation
[c] Calculated as an unweighted average

Private and Public Tip Fee Differences

Data regarding facility ownership type was collected with MSW tip fee information. Of the 351 landfills sampled, 119 landfills were privately owned and 232 were publicly owned. The average tip fee of privately owned facilities was greater compared to publicly owned facilities. Private facilities averaged $74.75, 34% greater than the $55.89 average for public facilities (Table 7). This continued the trend observed last year where private landfills had an average tip fee of $68.28 and public landfills had an average tip fee of $51.79. In 2024, private facilities represented 34% of all sampled facilities but had a higher average tip fee and managed a larger portion of the sampled tonnage at 62%, also similar to last year's trends (Table 7).

Table 7. MSW Landfill Tip Fee and Tonnage, by Ownership Type

Year		Private	Public
2023	Unweighted Average Tip Fee	$68.28 ± $38.57	$51.86 ± $25.74
	Average Tonnage	460,646	139,784
	% Total Tonnage	59%	41%
	% Facilities	30%	70%
2024	Unweighted Average Tip Fee	$74.75 ± $41.37	$55.89 ± $31.09
	Average Tonnage	488,771	151,931
	% Total Tonnage	62%	38%
	% Facilities	34%	66%

Solar Panel and Wind Turbine Blade Disposal Fees

Solid waste management facilities are increasingly responsible for the end-of-life management of renewable energy equipment. In 2022, over 20% of electricity in the U.S. was generated by renewable energy sources, with wind producing the most energy of all renewable sources at 10.3% and solar being the most popular for residential use (U.S. Department of Energy, 2022). For instance, it is estimated that cumulative global installed solar panel capacity will reach 4,512 GW in 2050, with an estimated 60 – 78 million tonnes of solar panel waste produced by that time as well (IRENA and IEA-PVPS, 2016). Additionally, research suggests there will be 43 million tonnes of wind turbine blade waste by 2050 (Liu & Barlow, 2017). As the use of renewable energy continues to rise, so will the need for the safe disposal of the equipment it utilizes.

EREF surveyed a subset of MSW landfills to assess their acceptance of solar panels and wind turbine blades, along with the corresponding tip fees (Table 8). Questions about renewable energy equipment disposal were integrated into the broader tipping fee surveys already underway, with outreach also including landfills in states with high solar and wind energy production. California, Florida, and Texas were selected as top solar states as they had some of the highest solar energy generation in 2023. Iowa, Oklahoma, and Texas were selected as wind states because they consistently rank among the nation's leaders in wind power production (SEIA 2024; EIA 2024). In total, 46 landfills were contacted about the disposal of renewable energy equipment. Of those, 18 facilities across nine states accepted one or both items, while an additional 28 facilities did not accept them or were unsure.

Oklahoma had the highest average tip fees for solar panels and wind turbine blades at $125 and $36.27, respectively. This is the only state where both solar panel and wind turbine tipping fee averages were greater than the unweighted state average MSW tipping fee. Texas had the lowest average tip fees for solar panels and wind turbine blades at $40.94 and $36.27, respectively. In addition, Texas's fees for solar panels and wind turbines were closest to the state average MSW tipping fee. Based on this assessment, the national average tip fee for solar panels was $63.34, and for wind turbine blades was $68.40. These are 2% and 10% greater than the unweighted national average MSW tipping fee of $62.28.

It is important to note that these findings are based on a limited study and reflect a relatively small sample size. As such, the averages should be considered preliminary and not necessarily representative of nationwide or industry trends. Additional data collection would be needed to determine whether the patterns observed here are consistent at a larger scale. Furthermore, many landfills that accepted wind turbine blades and solar panels had conditions that limited their disposal. For example, several landfills require wind turbine blades to be made of fiberglass or be broken down to an appropriate size before they can be accepted. Similarly, some landfills will not accept solar panels if they contain hazardous materials such as batteries.

Table 8. Select Solar Panel and Wind Turbine Blade Tip Fee, by State

State	Average Unweighted MSW Tip Fee	Solar Panel Tip Fee	Wind Turbine Blade Tip Fee
California	$83.76	N.R. [a]	$134.00
Florida	$53.47	$41.48*	- [b]
Georgia	$55.76	-	$72.22
Iowa	$49.73	N.R.	N.R.
Kentucky	$50.11	$48.25	-
Maine	$110.91	$104.94	$104.94
New York	$83.67	$85.00	$85.00
Oklahoma	$46.48	$125.00*	$56.74*
Texas	$42.56	$40.94*	$36.27*
Average	**$62.28**	**$63.34**	**$68.40**

[a] N.R. is used when the landfills surveyed in that state reported the acceptance of an item but did not report fee information
[b] A null value is used when no landfills surveyed in that state accept that item
[*] Denotes states with enough surveyed landfills to calculate an average

Economic Indicators and the National Average Tip Fee

In the 2022 Analysis of Landfill Tipping Fees, EREF began exploring the relationship between four economic indicators and the annual average tipping fee (EREF, 2023). Considering changes to tip fees are often made based on a landfill's revenue and operational expenditures, they can follow similar national economic indicators like the Consumer Price Index (CPI). Additionally, as vehicles play a vital role in waste management, changes to motor vehicle maintenance and motor vehicle manufacturing costs could impact fees. Lastly, wages and labor costs are a large expense for facilities and could impact certain operational expenses. A regression analysis conducted for the 2022 Analysis of Landfill Tipping Fees report indicated there is a moderate relationship between these factors and when they rise, so will the national tip fee average (EREF, 2023).

The relationship between CPI, motor vehicle repair, and vehicle manufacturing and tip fees are shown in Figure 6. These values, though still trending upwards, all experienced decreases in 2023. In 2024, all relationships show growth from the previous year. Average tip fees showed a rise along with the increases in these indicators. The strongest relationship was between tip fees and CPI (R2 = 0.82) in 2024, as opposed to vehicle manufacturing the previous year. The regression analysis for the motor vehicle repair (R2= 0.79) and vehicle manufacturing (R2= 0.80) demonstrated strong correlation as well.

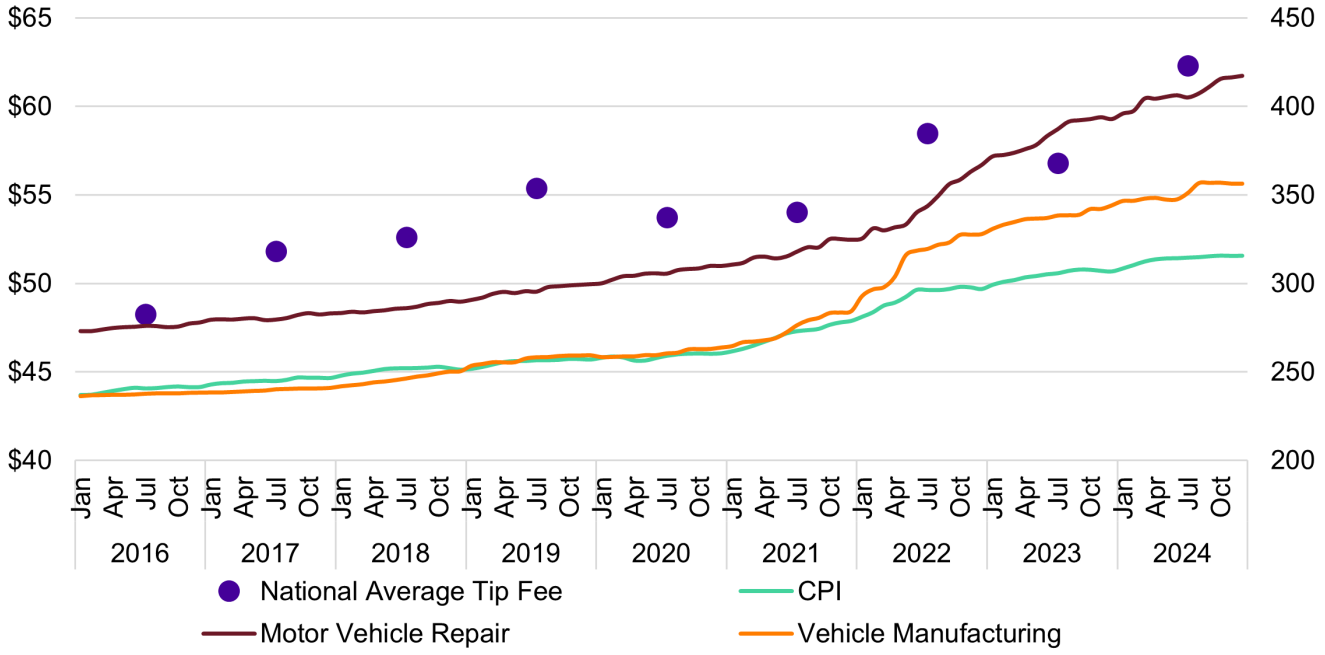

Figure 6. National Average Tip Fee Trend Compared to Economic Indicators

The relationship between wages and tip fees are shown in Figure 7. Labor costs are often a large expense for waste management services and many facilities increase tip fees to account for increasing wages. This year's analysis demonstrated the strongest index value relationship (R2 = 0.85) seen since 2022, and the strongest out of all economic indicators. Both wages and the average tip fee increased in 2024. This, combined with the regression analysis, indicates that as the cost of labor rises, tip fees also rise.

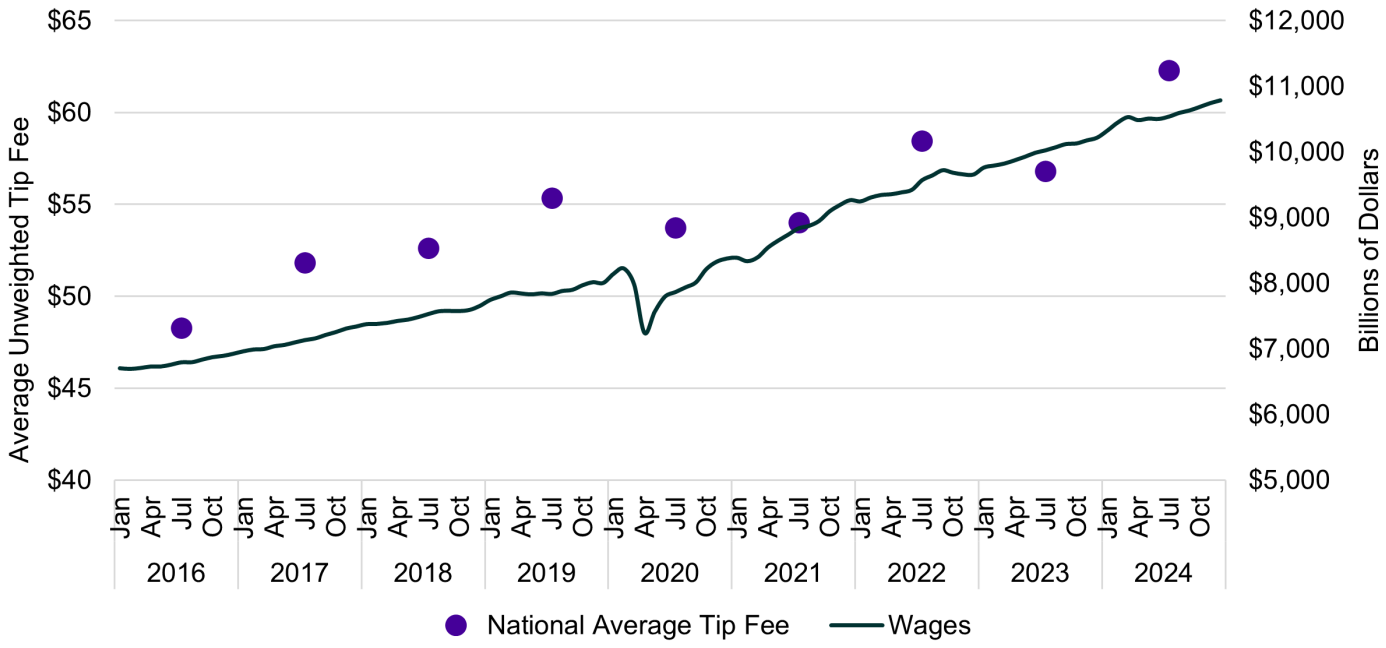

Figure 7. National Average Tip Fee Trend Compared to Wages

APPENDIX

Weighted Tip Fee Methodology

The weighted calculations are completed by weighting fees based on the landfill sizes and the percentage of national MSW tonnage disposed at each landfill size. The EREF database of MSW landfills across the United States provided the total percentage of national and regional MSW tonnage that each size landfill receives and was used in this analysis (EREF, 2017). Table A1 provides the percentage distribution.

Table A1. Distribution of Regional and National MSW Tonnage, Based on Landfill Size (Last updated 2023)

Region	Small	Medium	Large
Northeast	5%	38%	56%
Pacific	5%	22%	73%
Midwest	6%	38%	56%
Mountains/Plains	18%	45%	36%
Southeast	5%	45%	50%
South Central	7%	44%	49%
National	**6%**	**38%**	**56%**

Table A2. State and Regional Average Tip Fees, from October 2024 Survey[a] [b]

Region/State	Average Tipping Fee
Pacific	**$72.88 (± 42.55)**
Alaska	$124.25 (± 93.02)
Arizona	$50.10 (± 13.75)
California*	$83.76 (± 38.64)
Hawaii*	N.R.[d]
Idaho	$38.21 (± 15.82)
Nevada	$61.14 (± 22.43)
Oregon*	$65.98 (± 26.24)
Washington*	$47.70 (± 3.56)
Northeast	**$80.67 (± 29.28)**
Connecticut*	N.A.[c]
Delaware	N.R.
Maine*	$110.91 (± 8.78)
Maryland*	$84.14 (± 22.30)
Massachusetts*	N.R.
New Hampshire*	$110.46 (± 44.77)
New Jersey*	$79.12 (± 22.58)
New York*	$83.67 (± 25.43)
Pennsylvania*	$85.45 (± 22.26)
Rhode Island	N.R.
Vermont	N.R.
Virginia*	$63.72 (± 30.71)
West Virginia*	$45.92 (± 3.01)
Mountains/Plains	**$56.61 (± 30.13)**
Colorado	$52.58 (± 21.59)
Montana	$42.59 (± 16.86)
North Dakota	$49.00 (± 4.90)
South Dakota	$47.00 (± 9.46)
Utah	$35.30 (± 10.86)
Wyoming	$85.95 (± 38.70)

Table A2. State and Regional Average Tip Fees, from October 2024 Survey[a] [b]

Region/State	Average Tipping Fee
Midwest	**$66.09 (± 45.01)**
Illinois	$93.07 (± 35.98)
Indiana*	$43.56 (± 21.07)
Iowa*	$49.73 (± 14.14)
Kansas	$34.78 (± 17.30)
Michigan*	$77.93 (± 19.28)
Minnesota*	$77.39 (± 51.20)
Missouri	$136.65 (± 139.28)
Nebraska	$34.34 (± 9.41)
Ohio	$61.80 (± 29.60)
Wisconsin*	$85.64 (± 18.50)
Southeast	**$50.12 (± 22.88)**
Alabama	$38.78 (± 16.92)
Florida*	$53.47 (± 23.04)
Georgia	$55.76 (± 25.99)
Kentucky	$50.11 (± 24.82)
Mississippi	$31.90 (± 21.92)
North Carolina	$39.71 (± 5.35)
South Carolina	$56.20 (± 24.95)
Tennessee	$62.24 (± 28.26)
South Central	**$44.87 (± 22.05)**
Arkansas	$52.50 (± 39.54)
Louisiana	$39.39 (± 16.26)
New Mexico	$47.44 (± 7.45)
Oklahoma*	$46.48 (± 22.08)
Texas	$42.56 (± 20.19)
National Average	**$62.28 (± 35.98)**

[a] Regional and national averages computed on a facility-basis, and therefore do not equal the average of the individual state average reported herein

[b] Standard deviation shown in parentheses

[c] N.A. – not applicable, no landfills actively accepting MSW were identified in state

[d] N.R. – not reported, response rate did not meet threshold for publication

[*] Denotes state with WTE
